

Today's Challenges

- Movable assets are frequently transferred from originating department without any tracking or chain of custody process resulting in loss of asset control and unnecessary asset procurement due to perceived shortages
- Traditional Asset Ledgers do not maintain item specific detail needed to track equipment movement and disposition
- Asset ledger has not been maintained effectively
- Hospital staff focused on patient care, not asset management and tracking –As should be the case
- Equipment is retired and disposed of by departments without regard to remaining depreciation

Our Solution

Healthcare organizations across the country utilize our capital asset inventory services to fuel both financial reports and operational decision support. We have extensive experience in conducting asset physical inventories, offering two levels of service. In the first, our teams find, identify and count all capital assets in a methodical process capturing all found assets resulting in asset lists by area. The second service level is a reconciliation process that takes the next step in providing a comparison of assets to ledger for current depreciated asset valuation. All of our results are user friendly reports delivered via our on-line reporting portal. Beyond accurate inventory identification and valuation, these reports can provide insight into asset levels, and asset locations.

Management Health Solutions offers flexibility when performing capital asset inventory services; at the discretion of the client we can tag assets with barcodes or RFID tags as required by your asset management system. The physical counting is performed by experienced staff trained to

minimize interference with normal operations. Management Health Solutions completes internal audit checks on every job as it progresses through each stage of the process.

Benefits

- **Personnel** –No in-house overtime required and Management Health Solution's staff is Independent, Impartial and Auditable
- **Physical Inventories** – Comprehensive, on-site inventory services to establish accurate capital asset records
- **Perpetuation** – Physical re-inventories and report up dates to ensure that capital asset records and insured values are current.
- **Reporting** – The Online reporting portal from Management Health Solutions enable our clients to generate meaningful Capital asset management reports that address a wide variety of site-specific requirements.

Analytics & Reporting

- Portal Reporting

Additional Services Include:

- **Property Control Consulting** – Reviewing and enhancing internal policies and procedures related to ongoing capital asset management functions.
- **Valuations** – Calculating current depreciated value, replacement cost, and actual cash value valuations for equipment.
- **Bar Code Tracking Systems** – Affixing bar code asset tags and or RFID tags in support of the implementation and use of asset management technology for improved inventory control.

About MHS

Reduce Cost and Improve Patient Care through customized solutions designed to Optimize the Supply Chain within Hospitals and Health Systems.

Management Health Solutions, Inc. is a premiere healthcare information technology organization that provides integrated mobile supply chain software applications, content services, inventory valuation services, master data management and professional services to hospitals and healthcare systems nationwide. The company provides hospitals with software that manages the flow of supplies from the loading dock to the point-of-use, automating reorder, PAR management, replenishment, charge capture and hundreds of other processes. Combined with our services, analytics and optimization solutions, clients gain better visibility & control of their supply chain operations. MHS' software products and services, which are packaged into customized solutions, are designed to optimize the supply chain resulting in increased visibility, greater control, and lower cost and improved patient care.
