

Today's Challenges

- Increasing cost of drugs require proper inventory management to limit financial exposure within the institution
- Waste and/or expired drugs can have a detrimental effect to an organization's bottom line expenses and result in a loss of revenue
- Staffing challenges make it cost prohibitive to manage inventory through in house physical inventory activity

Our Solution

The physical counting is performed by experienced staff with minimal client staff involvement during the physical count. Management Health Solutions completes internal audit checks for each job as it progresses through each stage of our process. Item counts are estimated to the nearest tenth with the exception of Unit Dose which are counted to the "each". This, coupled with capturing NDC level data, allows for the validation of data entry at the time it is being captured.

Service Options

- Fully itemized count and reporting via our laptop computers
- Manpower for physical count only via Drug Wholesale company telxon scanners

Benefits

- Independent, Impartial and Auditable
- Materials Management and Finance specific reports available
- Cost effective services
- Consistent counting methodology
- Identification of expired items
- Flexible schedules to eliminate distractions or service disruptions
- MHS will utilize pharmacy acquisition pricing, direct pricing and IV Solutions pricing to value reports
- Additionally, MHS personnel can record posted prices from cost coded labeling
- MHS can inventory pharmacy satellites, outside areas & automatic dispensing machines

Analytics & Reporting

- User friendly reports delivered via our online reporting portal
- Reports provide insight into volume-adjusted drug category costs (e.g. antibiotics, anesthesia-related drugs, etc.), expired product expenses and show year over year inventory value fluctuations.
- Narcotic Class Reporting
- Therapeutic Classification Reporting

About MHS

Reduce Cost and Improve Patient Care through customized solutions designed to Optimize the Supply Chain within Hospitals and Health Systems.

Management Health Solutions, Inc. is a premier healthcare information technology organization that provides integrated mobile supply chain software applications, content services, inventory valuation services, master data management and professional services to hospitals and healthcare systems nationwide. The company provides hospitals with software that manages the flow of supplies from the loading dock to the point-of-use, automating reorder, PAR management, replenishment, charge capture and hundreds of other processes. Combined with our services, analytics and optimization solutions, clients gain better visibility & control of their supply chain operations. MHS software products and services, which are packaged into customized solutions, are designed to optimize the supply chain resulting in increased visibility, greater control, and lower cost and improved patient care.
