

Reduce Costs & Improve Patient Care.

About MHS:

Reduce Cost and Improve Patient Care through customized solutions designed to Optimize the Supply Chain within Hospitals and Health Systems.

Management Health Solutions, Inc. is a premiere healthcare information technology organization that provides integrated mobile supply chain software applications, content services, inventory valuation services, master data management and professional services to hospitals and healthcare systems nationwide. The company provides hospitals with software that manages the flow of supplies from the loading dock to the point-of-use, automating reorder, PAR management, replenishment, charge capture and hundreds of other processes. Combined with our services, analytics and optimization solutions, clients gain better visibility & control of their supply chain operations. MHS' software products and services which are package into customized solutions are designed to optimize the supply chain resulting in increased visibility, greater control, lower cost and improve patient care.

Today's Challenges

The cost of supplies is typically the second largest expense incurred by hospitals. In addition when supply costs are coupled with logistics, distribution and related support, the supply chain becomes the largest single cost with increasing complexity. With expense reduction a key factor in healthcare it's critical to reduce costs and improve cash flow.

Our Solution

MHS provides mobile supply chain products and services to optimize supply chain efficiencies, reduce cost, and improve patient care. We created customized solutions which are designed to optimize the Supply Chain by:

- Reducing inventories and establishing PAR levels based on demand
- Improving processes which maximize efficiencies regarding the flow, storage and management of supplies
- Creating efficient supply tracking processes from warehouse to point of use
- Providing effective data management services, standardizing and linking data across systems and departments
- Implementing a comprehensive mobile supply chain software which compliments existing MMIS and OR scheduling systems
- Creating superior visibility and control over supply chain operations through real time analytics

How does MHS optimize supply chain operations?

At the core of MHS' capability is a powerful suite of software solutions designed specifically to optimize supply chain operations for healthcare organizations. These software solutions integrate with existing information and materials management systems and provide mobile hand-held and touch screen functionality with one common user interface that has been designed for easy deployment. Unique to MHS, the company assesses, designs and implements an integrated program of mobile supply chain software, data and process improvements to drive cost out and revenue up. As the leader in the mobile supply chain software and clinical supply management segment(s) the company has acquired and developed deep domain expertise, advanced software applications, multiple data sources, benchmarks, best practices and analytical expertise. We use this deep understanding to access each client's needs then apply practical, cost-effective solutions to improve efficiencies in the organizations supply chain. The benefit for the client is a customized program designed to lower the cost of receiving, storing, using, tracking, and replenishing supplies and drive towards product standardization. In addition, these customized solutions increase revenue through detailed charge capture and procedure utilization.
